

OBJECTIVE

The Neurodiversity Index (Au 79 Index) provides exposure to 79 U.S. listed companies that have made a commitment in neurodiversity hiring, retention, leadership, and product developments.

Index Ticker

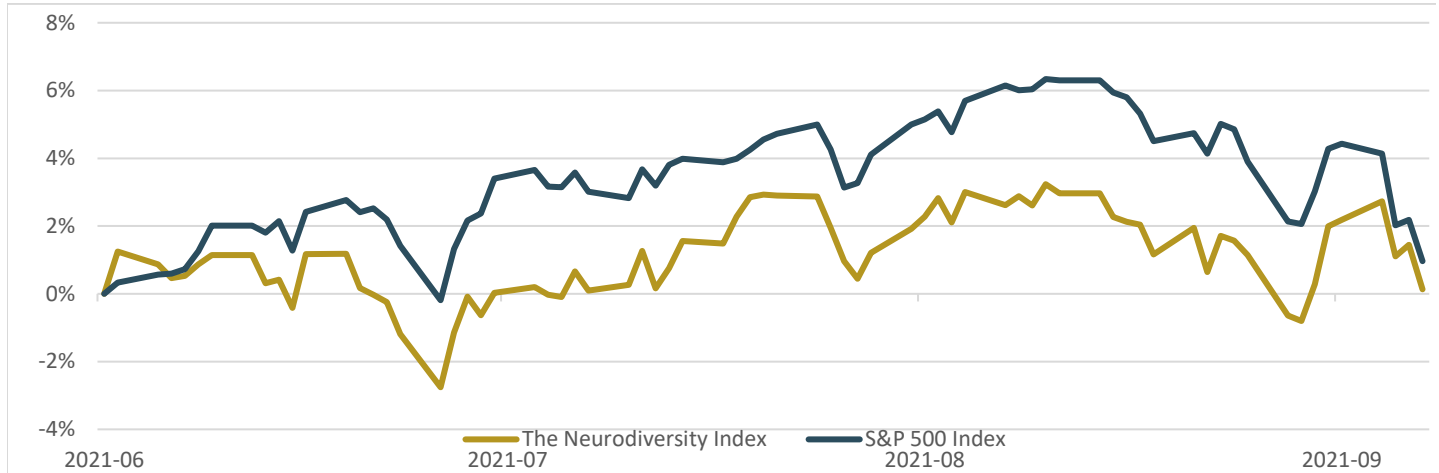

AULXXIX

METHODOLOGY

The index is an equal-weighted index measuring the performance of the top 79 U.S. listed companies that are leaders and advocates of the neurodiversity movement to support individuals with autism and other cognitive or neurological conditions. All companies are ranked by proprietary formulas and the research developed by a majority autistic team. The index is reconstituted and adjusted semi-annually. The index comprises 79 companies, as 79 is the periodic table number for gold, or Au(tistic).

FUNDAMENTAL FACTOR EXPOSURE

IPOX uses the beta coefficients as the factor exposure whereby the Neurodiversity's excess returns to the S&P 500 Index are regressed against a set of MSCI factor indices. This is different from the fundamental factor model, such as a BARRA or Axioma model may provide that are based on cross-sectional ranking and are generally in z-score form.

ABOUT NEURODIVERSITY

“Neurodiversity” simply means “brain diversity.” Basically, neurodiversity refers to the fact that people learn, socialize, process emotions, and do many other mental functions very differently from each other. But neurodiversity is not just a term, it also represents a broader concept. A concept that was created to push back against toxic and dangerous ways of understanding people with neurodevelopmental disorders. Neurodiversity as a concept not only identifies certain people, such as autistic people, as neurodiverse, but also seeks to influence the way we as a society view people we understand as neurodiverse. Specifically, it seeks to influence us to focus more on the unique strengths neurodiverse people have. To learn more, please visit <https://neurodiversityindex.com>
